- **EVOLVING** three lines of defence for banks
- **MAJOR** in stress testing calculations and methodologies for banks
- **MASTER** objectives for stress testing framework
- **OBTAIN** organizational strategies and oversight in banks

Why you Should Attend?

As the economic world becomes unpredictable again, it is important for a Financial/ Banking Professional to be able to analyse his finances to assess how bad things can be convert. Know in advance, what he can do and in which area and/or variables to focus.

However, the evidence seems to point to many organisations being more or less completely unprepared for the next major economic shock and fading memories of bad times have led to complacency. One of the key elements of good preparation for possible future shocks is an effective programme of stress testing. Whilst this has been compulsory for regulated financial institutions (Banks) for many years, other organisations have been slower to learn the lessons and adopt this practice.

This workshop will show you how to do things in logical, rational and objective way, quantifying the impact in your bank if, by any chance, your worst nightmares becomes true. Senior managers will learn the basic principles of stress testing and how to start to put together an effective framework.
